PUBLIC REALM

1. Sidewalk Amenities

Mobiliario Urbano

Bus shelters, trees, streetlights, and bike racks are all important elements of sidewalk space that contribute to a usable, active, and aesthetically friendly public space on sidewalks and plazas. This project will review existing street furniture and will propose streetscape amenities that best express the exuberant identity of Mission Street.

Cobra Head and Pedestrian streetlights are the two main light types found on Mission Street. Cobra Head lights are very utilitarian and excellent for night visibility, especially at intersections. Pedestrian lights are more useful at a pedestrian scale and are often associated to well-developed public spaces designed for human activities. During our field surveys we noticed other lighting sources that are not recorded in the PUC databases: active storefronts lights, wall mounted lights on buildings and pedestrian lights at the BART stations are important and contribute to the feeling of safety on the street.

Refugios de parada de autobús, árboles, farolas y el estacionamiento de bicicletas son bienes que mejoran y contribuyen al ambiente de las aceras y las plazas públicas. El proyecto evaluará el mobiliario urbano actual y propondrá mejoramientos que expresan la identidad de la Calle Mission.
