This person is about to dramatically sit down on our comfortable built-in wood bench located on the inside of our prototype.

This person is attracted by the wind arrows. She wants to touch it very much.

This person is enjoying her time with no wind inside the "warming hut" we created on our windy site.

This person is fascinated by our adorable wind arrows. She thinks our installation is very educational and she can learn a lot about the site.

Windscape attempts to visualize the wind condition altered by the urban context. Installation walls represent facade of buildings, changing directions and intensity of wind through compressing the space. Visualizing the pattern of wind provides an opportunity to educate the public of its changing condition. Behind the wall, enclosed spaces protects from severe wind and facilitate a multifunctional park as it provides activities such as climbing and fitness. Installation will attract the visitors to engage with the dynamic installation and make the most comfort sitting inside.
