Sidewalk Layout and Pole Location

**Poles Relocated**

The schematic design for Castro Street includes relocating muni/light poles to the widened sidewalk curb. A single row of trees would be planted in-line with the new poles. Having only one line of vertical elements allows for more flexible use of the sidewalks. These drawings illustrate the schematic design for the street with the poles relocated.

**Poles In Place**

Depending on budget, timing, and community preference - Castro Street’s Muni/light poles could remain in-place. A second row of trees in-line with the poles could be added in this option. These drawings illustrate a schematic design for the street with the poles in place.
