The goal of this exercise is to better understand your values and priorities. This feedback will guide the future design of Ocean Avenue. This exercise explores the trade-offs associated with re-designing a street. For example, more lanes of traffic, may speed travel time for cars or transit, but may mean narrower sidewalks and longer crosswalks. Wider sidewalks and shorter crossings improve pedestrian conditions, but may slow down cars or transit and reduce capacity. It is important to consider these trade-offs and the implications to people waking, riding bikes, using transit and drivers. For each set of images, participants will be asked to place a dot along the scale to indicate where their individual priorities fall along the spectrum.

WHAT IS MORE IMPORTANT TO YOU?

CROSSINGS THAT FAVOR CARS  |  NEUTRAL  |  CROSSINGS THAT FAVOR PEOPLE

MORE SPACE FOR TRANSIT  |  NEUTRAL  |  MORE SPACE FOR CARS
